Chapter 1

Class Index

1.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

BTNode	5
----------------------------------	---

Chapter 2

File Index

2.1 File List

Here is a list of all files with brief descriptions:

/home/drseth/CPTR227/20210224BinaryTreeStart/src/main.cpp	
This is a demonstration of simple binary trees	9

Chapter 3

Class Documentation

3.1 BTreeNode Class Reference

Collaboration diagram for BTreeNode:

Public Member Functions

- `BTreeNode ()`
- `int nodeNum ()`

Public Attributes

- `BTreeNode * left`
- `BTreeNode * right`
- `BTreeNode * parent`
- `int num`

Static Public Attributes

- `static int count = 0`

3.1.1 Detailed Description

Binary Tree Node

This is from Open Data Structures in C++ by Pat Morin

Definition at line 18 of file main.cpp.

3.1.2 Constructor & Destructor Documentation

3.1.2.1 BTreeNode()

```
BTreeNode::BTreeNode ( ) [inline]
```

[BTreeNode](#) constructor

Definition at line 29 of file main.cpp.

```
29     {
30         left = NULL;
31         right = NULL;
32         parent = NULL;
33         num = count++;
34     }
```

3.1.3 Member Function Documentation

3.1.3.1 nodeNum()

```
int BTreeNode::nodeNum ( ) [inline]
```

This reports the node's number

Definition at line 39 of file main.cpp.

```
39     {
40         return(num);
41     }
```

3.1.4 Member Data Documentation

3.1.4.1 count

```
int BTreeNode::count = 0 [static]
```

Definition at line 24 of file main.cpp.

3.1.4.2 left

`BTreeNode* BTreeNode::left`

Definition at line 20 of file main.cpp.

3.1.4.3 num

`int BTreeNode::num`

Definition at line 23 of file main.cpp.

3.1.4.4 parent

`BTreeNode* BTreeNode::parent`

Definition at line 22 of file main.cpp.

3.1.4.5 right

`BTreeNode* BTreeNode::right`

Definition at line 21 of file main.cpp.

The documentation for this class was generated from the following file:

- [/home/drseth/CPTR227/20210224BinaryTreeStart/src/main.cpp](#)

Chapter 4

File Documentation

4.1 /home/drseth/CPTR227/20210224BinaryTreeStart/src/main.cpp File Reference

This is a demonstration of simple binary trees.

```
#include <iostream>
```

Include dependency graph for main.cpp:

Classes

- class `BTNode`

Functions

- int `depth` (`BTNode *u`)
- int `height` (`BTNode *u`)
- `BTNode *` `genExampleTree` (`BTNode *root`)
- int `main` (int, char **)

4.1.1 Detailed Description

This is a demonstration of simple binary trees.

This is a demo from CPTR 227 class

Author

Seth McNeill

Date

2021 February 24

4.1.2 Function Documentation

4.1.2.1 depth()

```
int depth (  
    BTNode * u )
```

Calculates the depth (number of steps between node and root) of a node

Parameters

<i>pointer</i>	to BTNode to measure the depth of
----------------	---

Returns

integer count of depth

Definition at line 54 of file main.cpp.

```
54      {  
55      int d = 0; // depth counter  
56      while(u != NULL) {  
57          u = u->parent;  
58          d++;  
59      }  
60      return (--d);  
61 }
```

4.1.2.2 genExampleTree()

```
BTNode* genExampleTree (  
    BTNode * root )
```

This generates a simple tree to play with

It is a bit of a hack.

Definition at line 84 of file main.cpp.

```

84                                     {
85     BTNode* one = new BTNode();
86     BTNode* two = new BTNode();
87     BTNode* three = new BTNode();
88     BTNode* four = new BTNode();
89     BTNode* five = new BTNode();
90     BTNode* six = new BTNode();
91     cout << "Created the nodes" << endl;
92     root->left = one;
93     cout << "Added root->left" << endl;
94     one->parent = root;
95     root->right = two;
96     two->parent = root;
97     two->left = three;
98     three->parent = two;
99     two->right = four;
100    four->parent = two;
101    one->left = five;
102    five->parent = one;
103    five->left = six;
104    six->parent = five;
105    cout << "root's number: " << root->nodeNum() << endl;
106    cout << "one's number: " << one->nodeNum() << endl;
107    cout << "two's number: " << two->nodeNum() << endl;
108    cout << "three's number: " << three->nodeNum() << endl;
109    cout << "four's number: " << four->nodeNum() << endl;
110    cout << "five's number: " << five->nodeNum() << endl;
111    cout << "six's number: " << six->nodeNum() << endl;
112    cout << "six's depth is " << depth(six) << endl;
113    cout << "root's height is " << height(root) << endl;
114    return root;
115 }
```

4.1.2.3 height()

```

int height (
    BTNode * u )
```

This calculates the height (max number of steps until leaf node)

Parameters

<i>pointer</i>	to a BTNode
----------------	-----------------------------

Returns

integer count of height

Definition at line 70 of file main.cpp.

```

70                                     {
71     if (u == NULL) {
72         cout << "Reached NULL end of branch" << endl;
73         return(-1);
74     }
75     cout << "Calculating the height of node " << u->nodeNum() << endl;
76     return(1 + max(height(u->left), height(u->right)));
77 }
```

4.1.2.4 main()

```
int main (
    int ,
    char ** )
```

Definition at line 118 of file main.cpp.

```
118         {
119     BTreeNode* rootNode = new BTreeNode(); // pointer to the root node
120     genExampleTree(rootNode);
121     cout << "Hello, world! Binary Trees\n";
122 }
```
